Subject: Surface preparation using Bristle Blaster

Dear Mr. Kovarcek,

bristle blasting is an acceptable method of surface preparation prior to application of Chartek epoxy PFP materials, for maintenance and repair scenarios, providing the required surface preparation meets SSPC-SP10 or equivalent.

A surface tolerant primer such as Interplus 256/356 or Interseal 670HS is recommended.

Furthermore it is a possible method to remove Chartek or other existing coatings.

If there are any questions about do not hesitate to contact us.

Kind Regards

International Farbenwerke GmbH
